Romania Blockchain Summit 2019

TESTIMONIALS

Adrian Stratulat – Executive Manager

Asociatia Blockchain Romania: After the Summit ended, many people asked me how was the experience of organizing such a large event; and I can completely understand why - it's an innate human curiosity to want to know how things look "behind the curtain".

Well, organizing the Romania Blockchain Summit was one of the most intense and rewarding experiences for me. Intense because we were working in a small team and on a tight schedule - we managed to make the magic happen with just over 2 months of dedicated work. Rewarding because not only we had 100 top-level speakers delivering highly informative content over 22 panels; but because we managed to do so in front of 1500 people, and to roll over stories in over 50 worldwide publications.

Educating the public, aggregating the blockchain community in Romania and solidifying the dialogue with the public decisionmakers were always our Association's top priorities. I am very happy to conclude that the first edition of the Romania Blockchain Summit managed to check them all. Looking forward to next year's edition!

Mihai Alisie, Ethereum Co-Founder: I think Romania Blockchain Summit is a great initiative that could be nurtured and encouraged in the long run; it creates favorable conditions in which innovators, businesses and start-ups and learn from each other.

The regulations are the ones that have to be updated. We have two types of actions: actions born from curiosity, that expands the knowledge and grows opportunities – which I believe this event promotes - and actions born out of fear, and the ones running them don't even understand how this can negatively affect the country.

Sami Ben Jamaa, Managing Executive Officer Global Chief Information and Digital Officer, JERA Co., Inc. (Japan):

Romania is very big in the blockchain technology world-wide they have a big community of developers, businesses and start-ups, so they need to put it in a much larger way or talk about it with much more developers, I think this would make it more visible.

How can we make it bigger? Our continuous support to developers that made this event possible, to make it sustainable.

Romania has to be presented! I hope we can build more Blockchain Summits where we can attract powerful businesses, start-ups, and associations.
